Re: Managing Director, Portfolio Analysis and Strategic Initiatives – ATB Financial

Dear Hiring Team,

The Portfolio Analysis and Strategic Initiatives mandate ATB is standing up sits close to work I already do: at Moody's Analytics I led the design of an enterprise multi-asset cash flow projection and stress engine, replacing a manual spreadsheet baseline, and I hold delegated sign-off on valuation, sensitivity, and balance-sheet risk outputs for institutional portfolios of \$5-25bn per engagement. I would like to be considered for the Managing Director, Portfolio Analysis and Strategic Initiatives role reporting to the AVP of Enterprise Market Risk.

My mandate at Moody's runs parallel to the top-of-house work described in this role. I independently review curve construction, spread calibration, and cross-asset interactions before release; I review the aggregation logic that turns security-level exposures into portfolio-level risk metrics; and I prepare the commentary that senior stakeholders and Heads of Risk actually use to make decisions on scenario impacts and rate sensitivities. On the infrastructure side, I re-engineered manual spreadsheet workflows into auditable Python pipelines and sit on Moody's model governance committee, where methodology review, benchmarking standards, and model-performance assessment are recurring agenda items. Earlier, at Ortec Finance, I ran asset-only and surplus portfolio optimization on VaR and CVaR with risk decomposition and contribution-to-risk budgeting, built stochastic economic scenario generators, and presented findings to pension-fund investment committees. EY added cross-functional delivery experience: IFRS 17 and IFRS 9 transformation across actuarial, finance, IT, and risk functions.

What attracts me to this specific mandate is that it is a build, not a maintenance seat, and it spans both books. My depth is concentrated on the banking book and institutional-investment side rather than the trading desk; I would come in ready to learn ATB's Murex and DEEP/BigQuery environment, with the platform and modelling work I have done across PFaroe delivery, the Calypso-to-PFaroe migration, and Ortec's GLASS optimization engine as the transferable foundation.

I am based in Toronto, can accommodate ATB's on-site expectations, and am available for interviews immediately, with a start roughly four weeks after offer acceptance. Thank you for your consideration.

Sincerely,
