Re: Director, Model Validation – BMO

Dear Hiring Team,

I currently hold delegated sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios at Moody's Analytics – the core practice of a Director, Model Validation at BMO. My review mandate covers curve construction, spread calibration, cross-asset interaction analysis, and behavioral assumption defensibility, and I operate within a formal governance framework built around the functional-separation and documentation principles that SR 11-7 and OSFI E-23 codify. I would like to be considered for the Director, Model Validation role on your Model Risk Management team.

Over the past four years at Moody's I have combined independent model review with hands-on model development – a combination that, in my experience, makes a validator meaningfully more effective at challenging methodology choices. I led the design and build of an enterprise multi-asset cash-flow projection engine, validating outputs at every stage and embedding behavioral assumptions, prepayment logic, and macro stress overlays aligned with regulatory liquidity expectations. I also migrated a governance-critical spreadsheet-based valuation workflow into an auditable Python pipeline, running both environments in parallel for two production cycles before cutover – the governance audit closed satisfactorily. Before Moody's, I built and interpreted stochastic scenario generators for Canadian pension funds at Ortec Finance, and contributed to IFRS 9 and IFRS 17 transformation engagements at EY – providing both the quantitative depth and cross-functional program experience that Director-level model risk roles require.

BMO's Model Risk Management function carries a validation mandate that spans ALM, treasury, and investment models – precisely the intersection where my practitioner background sits. My experience in IRRBB shock analytics, derivatives sensitivity validation, stochastic modelling, and Python-based governance tooling maps directly onto the model types your team reviews. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University. I am based in Toronto, available for interviews immediately, and can commit to a start approximately four weeks after offer acceptance. My resume is attached and references are available upon request. Thank you for your consideration.

Sincerely,
