Re: Treasury Manager - Pension ALM & Strategy – TD

Dear Hiring Team,

I spent two and a half years at Ortec Finance delivering exactly the work this role is built around: ALM studies, LDI analysis, and funded-status stress testing for Canadian defined benefit pension plans. Most directly, I led the onboarding and ALM study for the University Pension Plan – a three-plan jointly-sponsored merger – modelling Funding Policy dynamics, duration positioning, currency and inflation hedging, and leverage overlays on a team of three, and presenting recommendations to the investment committee. That practitioner foundation is why I am writing about this seat on TD's Pension Investment team.

Since moving to Moody's Analytics, I have held delegated sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios ranging \$5-25bn per engagement. I led the design of an enterprise multi-scenario cash-flow projection engine with time-bucketed liquidity gap analytics and embedded stress overlays, and validated derivatives outputs and aggregation logic feeding portfolio-level governance reporting. I have also led the end-to-end implementation side of analytics platforms – managing the Calypso-to-PFaroe migration for all assigned pension, asset-manager, and consulting clients – coordinating timelines and stakeholders, scoping data requirements with product owners, and validating outputs post-deployment. That project coordination discipline maps onto what this role describes for onboarding investment managers, supporting new portfolio analytics and risk systems, and developing performance and risk dashboards.

What draws me to this specific seat is that it sits at the intersection of pension ALM strategy, governance, and operational execution – the same intersection I have worked at on the advisory side at Ortec and the platform side at Moody's. I would bring immediate fluency with funded-status risk, actuarial coordination, and committee-ready reporting, alongside the project management discipline to drive complex cross-functional initiatives to completion. I hold the CFA charter and dual MSc degrees from Western University, am based in Toronto, and can interview immediately.

Sincerely,
