SUMMARY

Applying for the Analyst / Senior Analyst, Total Plan Risk Management role at OMERS with ~7 years of experience across total-portfolio risk analytics, asset-liability studies, and quantitative research for pension and institutional investors. Hands-on with VaR/CVaR portfolio optimization, risk decomposition, stress and scenario analysis, LDI, and liquidity risk on multi-asset mandates – including direct experience with Ortec's GLASS platform. Strong Python fluency for large-dataset analytical workflows; CFA charterholder with dual MSc in Financial Modelling and Engineering.

CORE SKILLS

Total Portfolio Risk Analytics • VaR / CVaR & Risk Decomposition • Stress Testing & Scenario Analysis • Asset-Liability Study & LDI • Liquidity Risk & Cash-Flow Analytics • Stochastic Scenario Generation • Python & Large-Dataset Analytics • Investment Risk Reporting • Risk Governance & Policy Review • Ortec GLASS Platform

EXPERIENCE

Moody's Analytics

Asst. Director, Modelling Services (Investment & ALM Risk Lead) | Toronto, May 2023 – Present

Total Portfolio Risk Analytics & Investment Risk Insights

- Hold delegated sign-off authority on valuation, sensitivity, and risk outputs for multi-asset institutional portfolios ranging \$5-25bn per engagement; cumulative ~\$50bn book of work – independently reviewing curve construction, spread calibration, and cross-asset interactions prior to production release.
- Review aggregation logic converting security-level exposures into portfolio-level risk metrics – duration, key-rate sensitivities, and cross-asset interactions – feeding downstream investment risk reporting and risk-governance processes.
- Validate derivatives pricing outputs across rates, FX, and inflation; cross-check sensitivities and scenario impacts at portfolio aggregates for consistency and economic defensibility.

Stress Testing, Scenario Analysis & Liquidity Risk Research

- Led design and implementation of an enterprise multi-asset cash-flow projection engine supporting base, stress, and reverse-stress scenarios – delivering forward-looking liquidity risk visibility across multi-year asset-liability horizons.
- Architected configurable time-bucketed liquidity gap analytics (T+1 through multi-year) enabling funding optimization, refinancing risk assessment, and portfolio construction decisions under stressed market conditions.
- Embedded behavioral cash-flow assumptions, prepayment logic, and macro stress overlays into scenario research workflows aligned with executive contingency planning.

Risk Reporting Tools & Large-Dataset Analytics

- Re-engineered manual spreadsheet workflows into scalable, auditable Python analytics pipelines sourcing large datasets across multi-asset portfolios and feeding senior-stakeholder risk reporting.
- Prepared analytical summaries for senior stakeholders covering rate exposure, scenario impacts, and balance-sheet sensitivities; translated quantitative outputs into investment-committee-ready narratives.
- Built agentic AI development workflows (Claude Code, Cursor IDE) for code generation, validation scaffolding, and anomaly detection – reducing development cycle time an estimated 30-40% on comparable modules.

Client Service Specialist | Toronto, May 2022 – May 2023

- Onboarded U.S. and Canadian pension funds and asset managers onto an enterprise multi-asset analytics platform (PFaroe); validated asset, liability, and ALM configurations against client investment-team requirements.
- Contributed to the successful migration of all assigned client accounts from the legacy Calypso platform to PFaroe PM, scoping client needs into structured Product Owner requests for development.

Ernst & Young (EY)

Senior Consultant, IFRS & Financial Risk Transformation | Toronto, Sep 2021 – Apr 2022

- Delivered IFRS 17 and IFRS 9 transformation engagements for Canadian and international insurance clients, aligning regulatory requirements with system implementation and financial-reporting frameworks.
- Coordinated across actuarial, finance, IT, risk, and program-management teams on milestone delivery, governance documentation, and regulatory-readiness processes.

Ortec Finance Canada

Consultant, Asset-Liability Management & Risk | Toronto, Feb 2019 – Sep 2021

- Delivered asset-liability studies for Canadian and international pension funds and institutional investors; analyzed funded status, duration mismatch, and long-horizon balance-sheet risk under stochastic regimes.
- Performed asset-only and asset-liability (surplus) portfolio optimization and portfolio construction analysis based on VaR and CVaR using Ortec's GLASS platform; conducted risk decomposition, contribution-to-risk analysis, and near-optimal frontier robustness analysis to test allocation recommendations.
- Built and interpreted stochastic economic scenario generators to assess interest-rate, inflation, and currency risk and funding volatility under base-case and stressed environments.
- Conducted LDI analysis on multi-asset mandates: duration alignment, hedging trade-offs, and liquidity risk considerations supporting Strategic and Tactical Asset Allocation decisions.
- Modelled pension actuarial liabilities alongside major investment products and economic variables; performed cash-flow, liquidity risk, and hedging analysis across rates, inflation, and FX for institutional clients.
- Led onboarding and the ALM study for a three-plan university pension merger (jointly-sponsored plan); on a team of three, developed and validated the model capturing all Funding Policy dynamics and evaluated duration, currency, inflation, and leverage overlay strategies.
- Presented findings at on-site client meetings, including investment committees at Canadian pension-fund clients.

EDUCATION & CREDENTIALS

- Chartered Financial Analyst (CFA) – CFA Institute, 2024
- MSc, Financial Modelling – Western University, 2018
- MSc, Chemical Engineering (Full Scholarship) – Western University, 2016
