Re: Analyst / Senior Analyst, Total Plan Risk Management – OMERS

Dear Hiring Team,

I spent two and a half years at Ortec Finance delivering exactly the kind of total-plan risk work the OMERS Total Plan Risk Management team is built around: asset-liability studies for Canadian pension funds, VaR and CVaR portfolio optimization on multi-asset mandates using Ortec's GLASS platform, risk decomposition and contribution-to-risk analysis, stochastic stress testing of funded status under interest-rate, inflation, and FX regimes, and LDI research informing Strategic and Tactical Asset Allocation. I would like to be considered for the Analyst / Senior Analyst, Total Plan Risk Management role.

Since Ortec, I have spent four years at Moody's Analytics on the practitioner side of investment risk. I hold delegated sign-off authority on valuation, sensitivity, and risk outputs for multi-asset institutional portfolios (\$5-25bn per engagement), led the design and implementation of a cash-flow projection and stress-scenario engine that supports forward-looking liquidity research, and re-engineered manual workflows into Python analytics pipelines sourcing large investment datasets. The combination is directly relevant: pension-side total-portfolio research depth from Ortec – including hands-on GLASS experience – alongside the data, Python, and risk-governance discipline of a senior modelling seat at Moody's. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University.

What draws me to OMERS specifically is the Total Plan Risk team's mandate to be a thought partner on risk-taking across the plan, with ALM study, total-portfolio construction research, stress testing, and tactical tilt evaluation sitting in the same seat. That is the same intellectual problem I worked on at Ortec, scaled to a \$130bn member-driven plan, with the data infrastructure to do it properly. I would bring both the quantitative bench and the practitioner habit of translating analytics into decisions investment teams can act on. I am based in Toronto, available for interviews immediately, and can start approximately four weeks after offer acceptance. References available on request.

Sincerely,
