Re: Manager, IRRBB Measurement – RBC

I currently hold sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios at Moody's Analytics – the same discipline RBC's IRRBB Measurement team applies daily to its structural balance sheet. I would like to be considered for the Manager, IRRBB Measurement role.

Over the past four years at Moody's I led the design of a multi-scenario cash flow projection engine, reviewed interest rate risk under parallel and non-parallel shocks covering both EVE and earnings dimensions, and re-engineered spreadsheet workflows into auditable Python and SQL ETL pipelines with embedded balance-and-control checks. I have embedded behavioral cash flow assumptions and prepayment logic into production ALM systems, and I prepare ALCO-style analytical summaries – attribution of risk-measurement changes, scenario impacts, and balance sheet sensitivities – for Heads of Risk and investment committees. Before Moody's, I delivered stochastic ALM and LDI studies for Canadian pension funds at Ortec Finance, and IFRS 9 and IFRS 17 transformation at EY. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University.

What draws me specifically to RBC is the breadth of the IRRBB Measurement mandate – spanning domestic banking subsidiaries, CAD and US non-trading balance sheets, and the full ETL-to-ALCO-reporting chain. My practitioner background – sign-off on portfolios in the \$5-25bn range, Python and SQL pipeline builds, behavioral assumption embedding, and model governance documentation – maps directly onto what this role requires. I am based in Toronto, available for interviews immediately, and can start approximately four weeks after offer acceptance. My resume is attached; references are available on request. Thank you for your consideration.
