Re: Manager / Senior Manager, Quantitative Market Risk Models – Financial Engineering and Modeling – Deloitte

Dear Hiring Team,

At Moody's Analytics I currently hold delegated sign-off authority on valuation, sensitivity, and risk outputs for multi-asset institutional portfolios ranging \$5-25bn per engagement – independently reviewing derivatives pricing, curve calibration, and sensitivity behaviour before any output reaches a client. That model-validation and quantitative-governance discipline maps directly onto what Deloitte's Financial Engineering and Modeling group does for its banking clients, and it is why I am applying for the Manager / Senior Manager, Quantitative Market Risk Models – Financial Engineering and Modeling role.

Over the past four years at Moody's I have reviewed rates, FX, and inflation derivatives outputs, run interest-rate risk analytics under parallel and non-parallel shocks, and operated within a formal model-governance framework consistent with SR 11-7 and OSFI E-23 expectations. I led the design of a multi-scenario cash flow projection engine and rebuilt legacy spreadsheet workflows into auditable Python pipelines. At Ortec Finance I built and interpreted stochastic economic scenario generators using Monte Carlo simulation and performed VaR/CVaR-based portfolio optimization, risk decomposition, and hedging analysis for Canadian pension and institutional clients – presenting quantitative findings to investment committees. My dual MSc (Financial Modelling and Chemical Engineering from Western University) provides the PDE and numerical-methods foundation – finite-difference methods, binomial trees, Monte Carlo – that your practice builds on, and my CFA consolidates the practitioner credential. I will be transparent that my derivatives-validation experience has been on the buy-side institutional and ALM side rather than in a bank's trading-book capital team; I am building fluency in FRTB and CCR/xVA through structured study and see Deloitte's practice as the right environment to make that transition credible.

What draws me specifically to this role is Deloitte's client roster – the most sophisticated Canadian and international banks – and the breadth of the mandate across pricing, VaR/ES, and regulatory capital models. I am Toronto-based, available for interviews immediately, and can commit to a start approximately four weeks after offer acceptance. Resume attached; references on request. Thank you for your consideration.

Sincerely,
