Re: Senior Manager, Model Risk Governance – Scotiabank

Dear Hiring Team,

At Moody's Analytics I hold delegated sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios (\$5-25bn per engagement), operating within a formal model-governance framework with documentation standards, exception escalation protocols, and audit-readiness requirements aligned with SR 11-7 and OSFI E-23 expectations – the practitioner side of the policy, performance-monitoring, and inventory-accountability discipline the Senior Manager, Model Risk Governance role owns enterprise-wide at Scotiabank.

Over the past four years at Moody's I have independently reviewed model assumptions, curve construction, and cross-asset calibrations prior to production release; escalated outputs lacking economic defensibility; and rebuilt spreadsheet workflows into auditable Python pipelines with embedded logging, validation checks, and version control. I have authored the documentation sitting behind sign-off decisions, tracked exceptions through to remediation, and prepared executive-level presentations on scenario impacts and balance-sheet sensitivities for Heads of Risk and senior investment stakeholders. Earlier at EY I contributed to governance documentation, control design, and regulatory readiness processes on IFRS 17 and IFRS 9 transformation engagements for Canadian and international insurers; at Ortec Finance I built and validated stochastic ALM models and scenario generators for pension-fund clients, with documentation supporting client-side model reviews. I hold the CFA charter and dual MSc degrees (Financial Modelling, Chemical Engineering) from Western University, and work daily in Python and SQL with Power BI for reporting.

What draws me specifically to this role is the scope of the governance mandate – leading the design and continuous enhancement of the enterprise MRM Framework, Policy, and Standards; refining the model risk rating methodology; and embedding performance monitoring across all model types and business lines as E-23 takes full effect. My work already spans the practitioner, documentation, and reporting layers of model risk, and I am ready to apply that depth on the enterprise governance side of the function, across Scotiabank's model inventory and material subsidiaries.

I am Toronto-based, available for interviews immediately, and can start approximately four weeks after offer acceptance. Thank you for your time.

Sincerely,
