SUMMARY

Director, Investment Risk candidate with ~7 years across multi-asset institutional investment-risk analytics – VaR / CVaR portfolio optimization, risk decomposition and attribution, scenario and stress testing, and stochastic Monte Carlo modelling. Held delegated sign-off authority on valuation, sensitivity, and ALM outputs for institutional portfolios of \$5-25bn per engagement at Moody's Analytics; LDI and long-horizon scenario depth from Ortec Finance pension mandates. CFA charter, dual MSc (Financial Modelling, Engineering), Python-advanced.

CORE SKILLS

Investment Risk Measurement & Oversight • VaR & CVaR Portfolio Optimization • Risk Decomposition & Attribution • Scenario Analysis & Stress Testing • Multi-Asset Sensitivity Analytics • Stochastic & Monte Carlo Modelling • Liability-Driven Investment (LDI) • Python, SQL, Advanced Excel • CFA • Dual MSc Quant Foundation

PROFESSIONAL EXPERIENCE

Moody's Analytics

Asst. Director – Modelling Services | Toronto, May 2023 – Present

Investment Risk Measurement & Oversight

- Hold delegated sign-off authority on valuation, sensitivity, and risk outputs for multi-asset institutional portfolios ranging \$5-25bn per engagement, cumulatively covering ~\$50bn+ of institutional assets across the book.
- Independently review curve construction, spread calibration, and cross-asset interactions; escalate outputs lacking economic defensibility to Heads of Risk and investment stakeholders.
- Validate derivatives pricing outputs across rates, FX, and inflation; cross-check sensitivity consistency at portfolio-level aggregates.

Scenario Analysis, Stress Testing & Cash-Flow Projection

- Led design and implementation of an enterprise multi-asset cash-flow projection engine supporting base, stress, and reverse-stress scenarios across short- and long-horizon investment views.
- Architected configurable time-bucketed liquidity-gap analytics (T+1 through multi-year) supporting funding decisions, refinancing risk assessment, and asset-allocation analysis.
- Embedded behavioral assumptions, prepayment logic, and macro stress overlays into scenario outputs feeding portfolio-level risk reporting.

Analytics Engineering & Stakeholder Reporting

- Re-engineered manual spreadsheet workflows into scalable, auditable Python analytics pipelines with embedded validation controls.
- Built agentic AI development workflows (Claude Code, Cursor) automating code generation, validation scaffolding, and anomaly detection – reducing development cycle time on comparable modules by an estimated 30-40%.
- Prepared analytical summaries for senior stakeholders covering rate exposure, scenario impacts, and portfolio sensitivities – translating quantitative outputs into investment-committee-ready narratives.

Client Service Specialist | Toronto, May 2022 – May 2023

- Led onboarding and implementation for U.S. and Canadian pension funds, asset managers, and consulting firms migrating to the PFaroe multi-asset analytics platform.
- Served as technical liaison between client investment teams and product owners; advised on asset, liability, and portfolio configurations and validated model outputs post-deployment.
- Successfully migrated all assigned client accounts from the legacy Calypso environment to the PFaroe PM platform.

Ernst & Young (EY)

Senior Consultant – Financial Risk Transformation | Toronto, Sep 2021 – Apr 2022

- Delivered IFRS 17 and IFRS 9 transformation projects for Canadian and international insurance clients, aligning risk and accounting frameworks with system implementation.
- Advised actuarial, finance, IT, and program teams on adoption and governance documentation; contributed to regulatory-readiness processes for financial institutions.

Ortec Finance Canada

Consultant – Asset-Liability Management & Risk | Toronto, Feb 2019 – Sep 2021

- Performed asset-only and asset-liability (surplus) portfolio optimization based on VaR and CVaR using Ortec's GLASS platform; conducted risk decomposition, risk attribution, contribution-to-risk, risk-budgeting, and near-optimal frontier analysis to test robustness of allocation recommendations.
- Built and interpreted stochastic economic scenario generators to assess interest-rate, inflation, and currency risk and funding volatility under base-case and stressed environments.
- Delivered ALM and LDI studies for Canadian and international pension funds and institutional investors; advised on Strategic and Tactical Asset Allocation through stress testing and sensitivity analysis.
- Performed cash-flow, liquidity, and hedging analysis across interest-rate, inflation, and currency exposures; modelled pension actuarial liabilities alongside all major investment-product types.
- Presented findings at client on-site meetings, including discussions with pension-fund investment committees; led the ALM study for the University Pension Plan (UPP) JSPP merger of three university plans.

EDUCATION & CREDENTIALS

- Chartered Financial Analyst (CFA) – CFA Institute, 2024
- MSc, Financial Modelling – Western University, 2018
- MSc, Chemical Engineering (Full Scholarship) – Western University, 2016
