Re: Senior Associate, Investment Engineering & Analytics – CPP Investments

Dear Hiring Team,

At Moody's Analytics I hold delegated sign-off authority on production portfolio analytics delivered to multi-asset institutional clients in the \$5-25bn range, and I led the design of a cash-flow projection engine that runs base, stress, and reverse-stress macro scenarios in production Python. That end-to-end ownership – from data architecture through model validation to output consumed by portfolio managers – is the work IEA's Senior Associate, Investment Engineering & Analytics role describes, and it is what I do daily.

Before Moody's, at Ortec Finance, I built the quantitative foundation that maps most directly to CMF's systematic macro mandate. I ran systematic asset-only and surplus portfolio optimization on VaR and CVaR through the GLASS platform, calibrated stochastic macro scenario generators across rates, inflation, FX, and multi-asset returns, and performed factor-style risk decomposition and attribution for Canadian and international institutional clients. That work traced the full loop CMF asks for: scenario design, optimization, attribution, and recommendation delivered to investment committees – including a three-plan university pension merger I led from model development through client presentation. On the engineering side, I have re-built spreadsheet workflows into auditable Python pipelines with proper logging and version control, and I run agentic AI workflows in Claude Code and Cursor IDE that have reduced comparable module cycle time by an estimated 30-40%. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University.

What draws me specifically to IEA is the combination of rigorous systematic research, live portfolio support, and a mandate to raise the engineering bar – including practical AI leverage – across a world-class investment team. I am Toronto-based, available for interviews immediately, and can start approximately four weeks after offer. Thank you for your time.

Sincerely,
