Re: Analyst / Senior Analyst - Enhanced Analytics – Fitch Ratings

Dear Hiring Team,

For the past four years at Moody's Analytics I have operated exactly at the intersection the Analyst / Senior Analyst - Enhanced Analytics role describes: part analyst, part data engineer, building the Python pipelines and Excel applications that production research depends on, then using that infrastructure to produce data-driven outputs for institutional audiences. I would like to bring that hybrid capability to Fitch's CIPF Enhanced Analytics team.

My day-to-day technical stack is Python (pandas, NumPy, SciPy), SQL against relational stores (PostgreSQL and Oracle-analogous environments), VBA-driven Excel applications, and Git-based CI/CD - the core toolkit your posting lists as required. In that context I re-engineered manual spreadsheet workflows into auditable Python pipelines, designed a multi-asset cash-flow projection engine connecting portfolio, instrument and market-data sets, and produced research-grade summaries on rates and balance-sheet sensitivities for clients across the \$5-25bn range. More recently I have built agentic AI development workflows that reduced my team's build cycles by an estimated 30-40% on comparable modules. Before Moody's, at Ortec Finance I built and interpreted stochastic scenario generators integrating large market and macro data sets, and at EY I aligned accounting-standard data requirements with system and reporting architecture for insurance clients - both roles deepening the fixed-income and capital-markets context that CIPF analysts work in every day.

What draws me specifically to this seat is the entrepreneurial scale: a small hybrid team shaping the tools and data products used by more than 400 corporate-credit analysts globally. That leverage point - where good infrastructure and good research compound each other - is exactly where I want to operate next. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University, am Toronto-based, and am available to interview immediately. My resume is attached and references are available on request. Thank you for your consideration.

Sincerely,
