Re: Model Risk Management Analyst, AVP – MUFG Bank (Canada)

Dear Hiring Team,

I currently hold delegated sign-off authority on valuation, sensitivity, and ALM model outputs at Moody's Analytics – operating within a formal Model Governance framework, independently reviewing assumptions, economic defensibility, and stress behaviour before production release, and managing the resolution of findings with model developers. That review-and-challenge discipline is the core of the Model Risk Management Analyst, AVP mandate within MUFG's Quantitative Risk Control team, and it is the work I have been doing daily for the past three years.

The quantitative depth the role asks for runs across my career record. At Moody's I validate derivatives pricing outputs across rates, FX, and inflation; I designed and implemented a multi-asset cash flow projection engine embedding behavioural assumptions and macro stress overlays; and I re-engineered spreadsheet workflows into auditable Python pipelines with embedded validation controls. At Ortec Finance I built and validated stochastic economic scenario generators using Monte Carlo and statistical methods – running VaR and CVaR portfolio optimization with full risk decomposition and attribution. At EY I delivered IFRS 9 transformation engagements for Canadian and international insurance clients, including the data-sourcing, methodology, and governance documentation that underpin IFRS 9 model estimates – the exact credit-reserve modelling context the QRC team oversees. I work primarily in Python (advanced), with working proficiency in R and SQL. The CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering anchor the quantitative profile.

What draws me to MUFG specifically is the breadth of the QRC validation mandate – wholesale credit risk scoring, stress testing, economic capital, and IFRS 9 models sitting inside a single second-line team with direct regulator and internal audit exposure. I would bring the practitioner habit of reading a model output and asking whether it is economically defensible, not only mathematically valid, and the communication reflex of translating that judgment clearly for business owners, regulators, and audit. I am based in Toronto, available to interview immediately, and can start approximately four weeks after offer acceptance. Thank you for considering my application.

Sincerely,
