Re: Associate Director - Project Manager - Risk Services – RBC Capital Markets

Dear Hiring Team,

For the past four years at Moody's Analytics I have driven execution of concurrent, complex risk-analytics initiatives – coordinating developers, QA teams, and business analysts; maintaining project tracking artifacts and issue logs; and translating technical status into executive-level summaries for senior PMO stakeholders and Heads of Risk. That delivery structure maps directly onto the Associate Director - Project Manager - Risk Services mandate within RBC Capital Markets Quantitative and Technology Services.

My coordination footprint at Moody's spans the kind of enterprise risk build-outs described in your posting: leading the design and delivery of a multi-asset cash-flow projection and liquidity-gap engine, re-engineering manual workflows into auditable Python pipelines while managing shared engineering resources against aggressive release timelines, and maintaining delivery artifacts across multiple parallel initiatives with interdependent milestones. I hold delegated sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios (\$5-25bn per engagement), which has trained me to surface risks early, escalate cleanly, and keep PMO reporting current and accurate. Before Moody's I delivered IFRS 17 and IFRS 9 transformation programs at EY in a matrix model across actuarial, finance, IT, and risk functions – a direct analogue to the multi-team coordination your Risk Services team requires – and ran ALM advisory engagements at Ortec Finance, including the UPP three-plan merger study, where I coordinated a cross-functional team under tight client deadlines and presented findings directly to investment committees.

What draws me specifically to this role at RBC Capital Markets is that the Risk Services portfolio sits at the intersection of capital-markets risk content, enterprise delivery coordination, and senior-stakeholder communication – the three threads that have run through my entire career. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University.

I am based in Toronto, available for interviews immediately, and can start approximately four weeks after offer acceptance. Thank you for your consideration.

Sincerely,
