Re: Principal/Trader, Total Portfolio Management – OPTrust

Dear Hiring Team,

For the past seven years I have built the analytical and liability-hedging machinery that sits behind a Total Portfolio approach – pension ALM and LDI studies at Ortec Finance, and delegated sign-off authority on valuation, sensitivity, and cross-asset portfolio outputs for multi-asset institutional portfolios (\$5-25bn per engagement) at Moody's Analytics. I would like to be considered for the Principal/Trader, Total Portfolio Management role on OPTrust's Funding, Liquidity and Trading desk.

My work already lives in the vocabulary of your desk. On the fixed-income and FX side, I review and validate derivatives outputs across rates, FX, and inflation products and oversee duration and rate-shock analysis for pension and insurance mandates – the analytical foundation underneath liability-hedging decisions. On the liquidity side, I led the design of a multi-scenario cash-flow projection engine and time-bucketed liquidity-gap analytics used to size funding and asset-allocation decisions across long-dated horizons. At Ortec I ran asset-only and asset-liability portfolio optimization on VaR and CVaR via the GLASS platform – with risk decomposition and near-optimal frontier robustness testing – and built stochastic scenario generators calibrated to rate, inflation, and currency risk, presenting conclusions to pension investment committees. My Python and SQL pipelines are in daily production use, and I have deployed agentic-AI workflows (Claude Code, Cursor IDE) that measurably compressed development cycles; I am actively building AI-enabled tooling of exactly the kind your JD calls for.

What draws me specifically to OPTrust is the Total Portfolio Management mandate: allocating across internal and external strategies through a single top-down risk lens, with the liability-hedging program sitting inside the same desk that executes the trades. That is the seat where my ALM and LDI origin, my cross-asset analytics depth, and the AI-tooling instinct I have built at Moody's compound rather than compete. I am Toronto-based, available for interviews immediately, and can start approximately four weeks after offer acceptance. Thank you for your time.

Sincerely,
