Re: Senior Manager – Pension Investments – RBC Global Asset Management

Dear Hiring Team,

For the past two-plus years at Moody's Analytics I have held delegated sign-off authority on valuation, sensitivity, and portfolio-risk outputs for multi-asset institutional portfolios in the \$5-25bn range per engagement – evaluating strategy outputs across curve construction, spread calibration, and cross-asset interactions before every production release. Before Moody's, I spent nearly three years at Ortec Finance delivering ALM and LDI studies for Canadian pension funds and presenting allocation and hedging recommendations directly to investment committees on-site. The Senior Manager – Pension Investments role at RBC Global Asset Management is the natural convergence of both chapters.

The accountabilities on your posting map directly onto what I already do. On manager and strategy evaluation, my Ortec engagements benchmarked public and private mandates against liability objectives across funded-status scenarios; my current Moody's role reviews strategy outputs at the institutional level prior to release. On risk monitoring, I run duration, VaR, and CVaR analytics with risk decomposition and near-optimal frontier robustness testing via Ortec GLASS, and I designed the multi-scenario cash-flow projection and liquidity-gap engine now used across the institutional book. On liability hedging and derivative overlays, I have modelled duration, currency, inflation, and leverage overlays for a three-plan JSPP merger (UPP) and continue to validate derivative sensitivities feeding hedging portfolios today. On tooling, I have rebuilt Excel-driven workflows into Python analytics pipelines and use Python and SQL daily. On ESG, I have not run formal ESG-scoring processes, but I am a fast learner on new frameworks and hold the CFA charter, which covers ESG integration at the portfolio level.

What draws me specifically to RBC GAM is the fiduciary framing of overseeing both DB funded-status stability and DC participant capital accumulation from within an in-house pension team – that combination of liability discipline and participant outcome focus is exactly where I want to spend the next chapter. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering from Western University. I am Toronto-based, available for interviews immediately, and can start approximately four weeks after offer acceptance.

Sincerely,
