Re: Associate Director, Senior Business Analyst (Capital Markets) – Royal Bank of Canada

Dear Hiring Team,

At Moody's Analytics I spend my week doing exactly what the Associate Director, Senior Business Analyst (Capital Markets) role is built around: translating complex, ambiguous requirements from institutional clients into precise data specifications, reference-data logic, and validated analytics delivered on an enterprise platform. I hold delegated sign-off on valuation, sensitivity, and analytical outputs for multi-asset client portfolios of \$5-25bn per engagement, and I work directly with client Heads of Risk, finance, and investment stakeholders on the acceptance criteria those outputs must satisfy.

The capabilities RBC's Client Revenue Analytics, Client Resource Consumption, Client Plan, and Client Wallet initiatives require map cleanly onto what I do day-to-day. I led design of a multi-scenario cash-flow projection engine, defining the data models and aggregation logic that convert security-level exposures into portfolio-level metrics – the same structural problem as calculating client value across CIB transactions and Global Markets trades. I write advanced SQL and Python daily against relational data stores, re-engineered Excel-driven workflows into auditable pipelines with embedded data-quality controls, and collaborate with Product Owners and engineering in Agile/Scrum ceremonies to move requirements from backlog to production. My earlier EY IFRS 17/9 transformation work and Ortec ALM advisory sharpened the ability to hold alignment across risk, finance, actuarial, and technology teams under deadline pressure.

What draws me specifically to RBC Capital Markets is the scope of the client-value mandate – foundational reference data plus advanced analytics feeding profitability, resource-efficiency, and strategic-opportunity decisions across CIB and Global Markets. That is where practitioner depth in requirements definition, SQL and data-modeling fluency, and CFA-level product intuition compound. I hold the CFA charter and dual MSc degrees (Financial Modelling; Chemical Engineering) from Western University, and I am based in Toronto and available for on-premise collaboration.

I am available immediately for interviews and can start approximately four weeks after offer. Resume attached; references on request. Thank you for your consideration.

Sincerely,
