Re: VP Capital Markets Treasury Quant – RBC

Reviewing curve construction, spread calibration, and cross-asset interactions before analytics reach production is my current day job: at Moody's Analytics I hold delegated sign-off authority on valuation, sensitivity, and ALM outputs for multi-asset institutional portfolios of \$5-25bn per engagement. That mandate also covers validation of derivatives pricing across rates, FX, and inflation, and interest rate and duration analysis under parallel and non-parallel shocks. It is the analytical core of the Vice President, Capital Markets Treasury Quant role, and why I am applying.

On the development side, I led the design and implementation of an enterprise multi-asset cash-flow projection engine covering base, stress, and reverse-stress scenarios, and architected configurable time-bucketed liquidity gap analytics from T+1 through multi-year horizons -- directly relevant to the funding, refinancing, and liquidity questions Capital Markets Treasury works through daily. The build was Python-first: I re-engineered manual spreadsheet workflows into auditable pipelines, and I use Claude Code and Cursor daily for code generation, validation scaffolding, and documentation, cutting cycle time an estimated 30-40% on comparable modules.

I also sit on Moody's model governance committee, contributing to methodology review, documentation standards, and ongoing model-performance assessment -- and I am the escalation point when an output is mathematically defensible but economically unsupported. Explaining that judgement to clients' Heads of Risk and investment teams is routine. Earlier roles extend the balance-sheet-risk bench: IFRS 9 and IFRS 17 transformation delivery at EY, and at Ortec Finance stochastic economic scenario generators plus interest rate, inflation, and currency hedging analysis for institutional investors. I hold the CFA charter and dual MSc degrees in Financial Modelling and Chemical Engineering.

RBC's Capital Markets Treasury Quant team sits at the intersection of funding, liquidity, fixed-income, and hedging-derivative analytics with model documentation and governance -- the exact analytical intersection I've operated in for seven years, and where I would take ownership from day one. I am Toronto-based, available to interview immediately, and can start approximately four weeks after an offer.

Sincerely,
