Re: Director, Business Analytics and Insights – CI Financial

For the past four years at Moody's Analytics I have built and delivered the analytics that asset managers, pension funds, and consulting firms rely on to manage risk and investment decisions - an institutional and wealth-management buyer base adjacent to CI's own. That work has been equal parts insight generation and analytics engineering: leading the design of an enterprise multi-asset cash-flow projection engine, re-engineering manual spreadsheet reporting into audited Python pipelines, and standing behind the numbers with delegated sign-off on outputs for portfolios of \$5-25bn per engagement. I would like to be considered for the Director, Business Analytics and Insights role on CI's D&A team.

What I think transfers most directly to this mandate is the AI-enablement and prototyping discipline. I build with agentic AI workflows daily - Claude Code and Cursor for code generation, validation scaffolding, anomaly detection, and documentation - which has cut development cycle time an estimated 30-40% on comparable modules. I prototype rather than theorize: new pipelines are built in parallel, run in shadow mode against live delivery for two cycles, reconciled, and only then cut over - the same discipline I'd bring to scaling AI use cases across your business partners. On the partnership side, I am the escalation point for client Heads of Risk and investment stakeholders, translate quantitative output into investment-committee-ready narratives, and mentor junior colleagues as senior reviewer within a twelve-person modelling services team.

What draws me to CI specifically is your D&A team's mandate to combine business partnership with practical AI adoption rather than treating it as a lab exercise - the same intersection I have been converging on for seven years across pension, asset-management, and institutional clients. My CFA charter and dual MSc degrees (Financial Modelling; Chemical Engineering) provide the quantitative grounding the role asks for. I am Toronto-based, available to interview immediately, and can start approximately four weeks after offer acceptance. References available on request.

Sincerely,
