Re: Senior Manager Analytics Insights – Deloitte

Dear Hiring Team,

Between Ortec Finance's advisory practice and EY's financial-risk transformation team I spent just over three years delivering the analytics-led consulting work Deloitte's Analytic Insights team is built around; for the last four years at Moody's Analytics I have been the practitioner who quality-assures it, holding delegated sign-off authority on analytical outputs delivered to institutional client portfolios of \$5-25bn per engagement. I would like to be considered for the Senior Manager, Analytics Insights role.

My work sits exactly where this role sits: between ambiguous client problems and defensible analytics. At Ortec I built stochastic scenario generators, ran asset-only and surplus optimization on VaR and CVaR, decomposed risk contributions to test the robustness of recommendations, and presented the conclusions on-site to pension investment committees. At Moody's I led the design of a multi-scenario cash flow projection engine, re-engineered spreadsheet workflows into auditable Python pipelines, and sit on the model governance committee that sets methodology, documentation, and benchmarking standards. I have also deployed agentic and generative-AI development workflows (Claude Code, Cursor) that cut development cycle time an estimated 30-40% on comparable modules.

What draws me to Analytic Insights specifically is the team's deliberate mix of deep technical depth and business judgment, and the mandate to embed AI-enabled delivery into client decision-making. Most enterprise AI programs stall at adoption because nobody owns the validation and documentation discipline behind them. That is the discipline I practise daily: I use agentic AI tools hands-on, and I also review, document, and escalate what they produce before it reaches a client. Combined with a consulting foundation at EY, where I helped build IFRS 17 advisory offerings and go-to-market collateral, I would bring both delivery credibility and a point of view on how analytics assets get productized and reused.

I am Toronto-based, available for interviews immediately, and can start approximately four weeks after offer acceptance. My resume is attached and references, including former EY colleagues, are available on request. Thank you for your consideration.

Sincerely,
